PERSONAL PROJECTS

Human drowsiness detection system (07-2018)

This application alert the vehicle driver about the presence of drowsiness and it is implemented using a smartphone. The most relevant visual indicators that reflect the driver's condition are the behaviour of the eyes, which will then be used to detect drowsiness.

Wearable tracker (06/2015)

This is wearable tracker and notifier for amusement parks and offices based on bluetooth and RFID.

Raising funds for cancer patients (02/2015)

A platform to increase the ratio of funders in a potentially ascending manner. Crowdfunding & seed funding has given it a spiritual touch to survive in current market situation.

Wireless rocket launcher (04/2014)

In this project we are leading with the fields such as rocketry, physics, electronics and computers. A wireless triggering system to trigger the rocket & provide us with necessary environmental data.

Business card in AR (02/2017)

An augmented reality project which includes unity engine as its based on an android app.
